

Learning Needs Analysis

Time Management Training Program

Statement of Purpose	Need of Creating this Technical Document
To determine whether a time management training program is needed and identify the knowledge and skills employees require to improve productivity, prioritize tasks effectively, and meet deadlines consistently.	This document analyzes the performance gap, identifies the target audience, and recommends an instructional solution. It serves as the foundation for designing a learner-centered time management course.
Situation	Who is the Audience?
Employees are balancing multiple projects, frequent meetings, emails, and competing priorities. While they understand their job responsibilities, many struggle to organize their workload efficiently, leading to missed deadlines, increased stress, and inconsistent productivity. Manager feedback and employee surveys indicate that learners would benefit from practical strategies for planning, prioritizing, and managing their time more effectively.	Internal employees
	How Large is the Audience?
	Approximately 150–250 office-based employees across multiple departments.
	What is Their Expertise Related to the Subject Matter?
	Learners are familiar with workplace tools such as email, calendars, and task lists but have received little or no formal training in time management techniques.
	Is the Audience Likely to be Resistant?
	Resistance is expected to be low . Employees recognize the value of improving their productivity but may be skeptical of generic productivity advice. Therefore, the course should focus on practical, immediately applicable strategies.
	Will the Audience Require Special Equipment or Software?
	No specialized equipment is required. Learners will need: • Computer or mobile device • Internet connection • Modern web browser
Goals of Communication	What Results Do You Expect the Technical Communication to Deliver?
The course will help learners: • Prioritize tasks effectively. • Plan their workday using simple techniques. • Identify common time wasters. • Reduce procrastination.	After completing the training, learners should be able to organize their workload more effectively, manage competing priorities, and complete tasks within expected deadlines. Improved planning skills are expected to contribute to increased productivity and reduced workplace stress.

• Apply practical strategies to improve productivity.	What New Skills, Actions, or Behaviors Are You Trying to Elicit? Learners will: • Plan their day before beginning work. • Prioritize tasks based on importance and urgency. • Minimize distractions during focused work. • Break large tasks into manageable steps. Review and adjust priorities throughout the day.
